

DATA SHEET

Health and Risk Assessment Service for Microsoft Office SharePoint Server

Ensuring that you get the most out of your collaboration solution investment

Proactive service
based on industry
best-practices,
performed by certified
SharePoint experts.

The SharePoint Health Assessment is exceedingly comprehensive and includes, but is certainly not limited to, the following areas:

- SharePoint Server Configuration
- Database Server Configuration
- Operating System Configuration
- Hardware Configuration
- Security Configuration
- Farm / Site Topology
- Search Configuration
- SharePoint Performance
- SharePoint Scalability
- Backup & Restoration Capability

Background

In many organizations across the world, whether large or small, private sector or government agency, Microsoft SharePoint has become the mission-critical centerpiece of information management and collaboration upon which they rely. If SharePoint isn't performing well, it could result in a significant negative impact.

In the best case perhaps only productivity and efficiency suffer, resulting in a less-than-optimum return on investment. In more severe cases, a failed or failing SharePoint system can represent a complete loss of core capabilities, impeding the flow of information and worker processes to an alarming degree.

Possible outcomes of a misconfigured, failed or failing SharePoint environment include:

- Loss (Or Corruption) Of Critical Information
- Decreased ROI
- Loss of Core Capabilities
- Network Security Breach
- Exposure of Sensitive Information
- Decreased Productivity
- User Frustration
- System Downtime

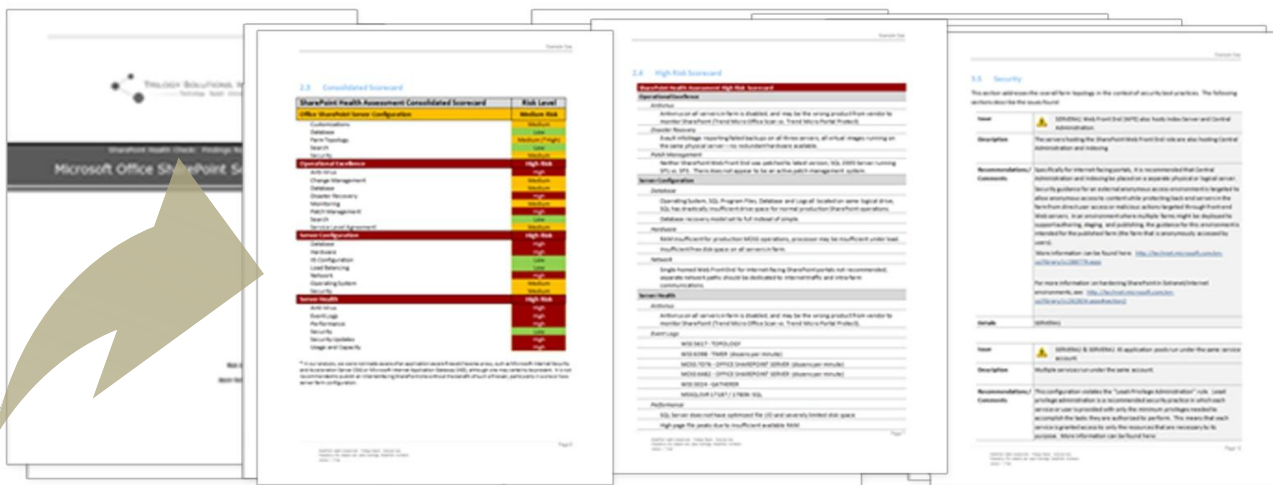

Service Overview

The SharePoint Health Assessment is a **fixed-cost** service offered by Trilogy Solutions, designed to prevent the scenarios listed above and realign your SharePoint system with Microsoft and industry standard best practices to help ensure that the information and functionality you depend on is available when you need it.

Our SharePoint Health Assessment is designed to provide:

- Detailed analysis of your SharePoint (2007 or 2010) farm
- Reduced service outages & support costs
- Improved performance
- Practical recommendations for leveraging the software that you've already purchased
- A detailed findings report that identifies areas of concern as well as corrective actions

During the Health Assessment, our certified SharePoint engineers perform an exhaustive analysis of your SharePoint environment to uncover potential risks to system stability, scale, security and performance. The results are delivered to you in an easy to interpret scorecard format, with extremely detailed drill-down information describing the risk as well as applicable guidance for mitigation or correction.

Example: Pages from Health Assessment Findings Report

Low	Indicates that no significant issues were found in this area that posed a future risk to service.
Medium	Indicates that issues were identified that should be addressed in the near-term to prevent future disruptions in service.
High	Indicates that critical issues exist that must be addressed immediately to prevent significant disruptions in service.

Our Expertise

Founded by senior collaboration engineers from Microsoft and Raytheon, Trilogy Solutions employs some of the most experienced and sought-after SharePoint consultants in the world.

Our consultants have designed and deployed some of the largest, most complex SharePoint systems currently in operation anywhere in the country, including:
